

Stavanger, Norway

EUROCORR 2025

7 - 11 September

EUROPEAN CORROSION CONGRESS

Announcement of a joint session on **POLYMERS IN ORGANIC COATINGS**

Although polymers are part of organic coatings, most of the work presented in the coatings session usually focuses on the interfacial properties of coatings and the development of new coating systems. In comparison, the results presented in the polymer materials session mainly focus on the application and behaviour of bulk structural materials.

Therefore, it has become a good tradition to organise a joint session between the two working parties at EUROCORR in order to bridge the gap between people working on organic coatings on metal surfaces and those working on polymer materials.

Contributions from academics and industry are welcome for this joint session, which could address some of the following points (to be completed):

- Polymer behaviour in structural materials and in organic coatings,
- Mechanisms of corrosion protection by bulk properties of polymeric materials and appropriate methods of investigation
- Main influences on polymers in organic coatings and their consequences on the protective properties of organic coatings,
- Application cases and feedback,
- Inspection and monitoring techniques ...

Session organiser:

Marie-Georges OLIVIER
Chair WP 14 Coatings

Jürgen HEINEMANN
Chair WP 19 Corrosion of
Polymer Materials

Expected duration: 1 day

Expected audience: 50 persons

Please submit your abstract online via www.eurocorr.org before 17th of January 2025. We are looking forward to your contribution and participation in EUROCORR 2025, on September 7-11, 2025, in Stavanger, Norway!
